Dissertation Evaluation

* Award of 200 marks as given below, 75 marks for evaluation by the internal examiner. 75 marks for evaluation by the external examiner.

50 marks for the joint viva voce examination conducted by the internal & external examiners.

List of Moduler Courses for 15PSTP02MX

Spatial Modelling
Introduction to Rural Development

List of Major Elective Courses for 15PSTP02EX

15PSTP02E1	Geography
15PSTP02E2	Geology
15PSTP02E3	Watershed Management
15PSTP02E4	Regional Development & Planning
15PSTP02E6	Open source software

P.G.Diploma in Spatial Technologies

(To be offered from the Academic year 2015 – 16 under the CBCS)

S E M E S T E R – 1

CENTRE FOR GEOINFORMATICS

The Gandhigram Rural Institute – Deemed University, Gandhigram – 624302

15PSTP0101	**Core Course** **Introduction to Spatial Technologies**	3 Credits

Objective:

To introduce Spatial as an advance tool consists of various advance science and technologies used for mapping and managing earth resources.

Specific Objectives of Learning:

1. To introduce the science and technologies involved in Spatial Technologies
2. To explain the earth and mapping principles.
3. To impart knowledge on traditional, conventional and advance surveying technologies.
4. To learn basics about the Geodata & WebGIS.
5. To apply Geoinformatics in various fields

UNIT 1 Spatial Technologies	Meaning and Scope of Geoinformatics – Science and Technologies involved: Cartography- Geodesy- Geology- Remote Sensing- Geographical Information System- Photogrammetry - Information & Communication Technologies- Global Positioning System- Digital Image Processing - Map as decision tool.
UNIT 2 Earth	Earth – Origin, Interior, Age, size, shape and Physiography of the Earth - Sources and methods of acquiring geodata Atmosphere: Origin and nature, Composition and layers of the atmosphere. Fundamental principles of acquiring earth related information: geodetic information - lat - long - time - altimetry – bio-physical and bio-chemical information.
UNIT 3 Basics Principles of Surveying	Basic principles of surveying – Classification and applications- Scales - Conventional signs - Survey instruments, their care and adjustment - traversing, trilateration and triangulation - conventional, electronic (total station) - Aerial and Satellite based survey techniques (Photogrammetry, RADAR, LiDAR) - Survey by GPS.
UNIT 4 Geodata Visualization	Geodata visualization and analysis - two – three – fourth dimension viewing - viewing by animation - Visualization by hyper map - virtual images – webGIS.
UNIT 5 Applications	Application of Geoinformatics: Rural Development, Geosciences, Agriculture, Forestry, Soil Studies, Meteorology, Military, Transport, Environmental studies, Banking and Health Civil Engineering etc.,

Text Book

1. LO. C.P., and Albert K.W.Yeung, Concepts and Techniques of Geographic Information Systems, Prentice-Hall of India, New Delhi, 2006.

Reference Books

1. Peter A. Burrough and Rachael A. Mc. Donnell, Principles of Geographical Information System, Oxford University Press Inc., New York, 2004.
2. Ian Heywood, Sarah Cornelivs and Steve Carver, An Introduction to Geographical Information System, Pearson Education Pvt .Ltd., New Delhi, 2007.
3. Arthur H. Robinson et al. Elements of Cartography, V Edition, John Wiley & Sons, New Delhi, 2002.
4. Misra, R.P.and Ramesh, A, Fundamentals of Cartography, Concept Publishing Company, New Delhi, 2002.
5. Lillesand M. Thomas and Ralph W.Kiefer, Remote Sensing and Image Interpretation, John Wiley & Sons, New York, 2007.

15PSTP0102	**Core Course** **Elements of Cartography**	3 Credits

Objectives

To know the basic principles and importance of Cartography, various maps projection/ co-ordinate systems, generalization, different aspects of map design/ layout, and different techniques of map production for reproduction.

Specific Objectives of Learning:

1. To know the basics, importance, and methods of Cartography
2. To study the various maps projection and co-ordinate systems.
3. To learn the different aspects of design in cartography.
4. To learn the generalization and designing aspects of cartography.
5. To study the different techniques of map production and reproduction

UNIT 1 Maps	Basics: Map - Definition - Need - characteristics - Components and types of maps Principles and History of cartography.
UNIT 2 Coordinate systems	Distortions in maps: angle-area-distance-direction-shape - Transferring geoid information to paper maps - Spherical and Rectangular coordinate systems - UTM projection system - classification of projections and applications
UNIT 3 Map database	Spatial database: Survey of India – NRSC - BHUVAN - NATMO – Geological Survey of India - Census of India –National Informatics Centre - Cadastral maps – openstreet map – foreign sources of data - Physical surveying - GPS and Total station. Attribute database: Census of India- statistical – National Informatics Centre – India stat – year books - other attribute data sources available in Internet for mapping.
UNIT 4 Mapping Techniques	Map as a communication system - Theory of Perception - Symbolization: Conventional signs and symbols - quantitative, qualitative symbols – use of colour. Qualitative mapping technique - Choroschematic and Chorochromatic. Quantitative mapping techniques: Choropleth - Isopleth
UNIT 5 Map design and Layout	Scientific and artistic aspects of design and layout - Overall map designing: size and shape of maps - preparation for presentation - dominance, simplicity, harmony, balance, pattern, variation and contrast – lettering - Design of internal map elements: map title, legend, scale, grid, direction, border. Intellectual design: Map generalization -Map reproduction: Methods of printing

15PSTP0103	**Core Course** **IT for Spatial Technologies**	3 Credits

Objective:

To introduce the IT tools and its applications in Spatial Technologies, and also to learn the basic Computing Skills, Storage Mechanisms Operating Systems, various software and hardware devices.

Specific Objectives of Learning:

1. To expose about the computer, storage devices and other components
2. To know the usefulness of computers in GIS
3. To learn the network security and fundamentals of protecting a system from virus and malwares.
4. To train for in gathering information from the internet through WWW.
5. To explore Google Earth & Google maps.

UNIT 1 Computer System	The Computer System - types of computers - foundations of modern technology - microprocessor fabrication - types of memory – buses - Communication with peripherals – server- client concepts and networking.
UNIT 2 Devices	Input, output and storage : input and output devices - pointing devices - foundations of modern output - display screens – printers - secondary storage - foundations of modern storage - storage media - floppy disk, hard disk drive and optical disk – pen drive - increasing data storage capacity - backing up your data.
UNIT 3 Software	Software - user interfaces - application programs - Operating systems - file management and utilities - document - centric computing - major software issues - network computing - Information Technology today - Introduction to IT - information system software and data - Global Positioning System - applications of IT in GPS - Information Technology in Remote Sensing - GIS Applications of IT in Cartography - Applications of IT in Real Time GIS.
UNIT 4 Internet and World Wide Web	Introduction to World Wide Web and Web - Foundations of modern networks - Local Area Network - introduction, architecture and system - introduction of Wide Area Network. Some Internet Applications : Email, Information browsing, WWW, Information - retrieval from the web, Other facilities provided by the browser, audio /video/ pictures, animation on the internet -Introduction to applications such as Google maps and Google earth.
UNIT 5 Security and Ethics	Personal, Social and Ethical Issues: Computers and health - viruses - computer crime – cryptography. Concept of fire wall - network security - wireless technology and security.

Text Book

1. Dennis P. Curtin, Kim Foley, Kunal Sen & Cathleen Morin, Information Technology - The Breaking Wave, Tata McGraw Hill Ed., 1999. Chapters: 1, 2, 3, 4, 5, 6, 9, 10, 11&13.

Reference Books

1. Rajaraman V., Fundamentals of Computers, 4/e, Prentice Hall of India, New Delhi, 2008.

3. Brain K.Williams, Stacey C.Sawyer, Sarah E.Hutchinson, using Information Technology, 3/e, TMH publication, 2008
4. Subash Mehta, Global Business Press, Understanding and Using Internet, New Delhi. (1996)
5. Cryptography and Network Security, William Stallings, 1999, 5th Edition, Pearson Education, Inc., publishing as Prentice Hall.

15PSTP0104	**Core Course** **Geographical Information System**	**4 Credits**

Objective: *Understand and gather knowledge about the basic principles of GIS.*

Specific Objectives of Learning:

1. To introduce use of computer in mapping, GIS, components, data structure, modelling, DBMS
2. To learn about encoding methods and editing of data
3. To know various capabilities of GIS
4. To study about various models of GIS
5. To understand output from GIS and SDSS

UNIT 1 Basics of GIS	Map– computer assisted mapping – GIS -components of GIS – Data used in GIS characteristics of Spatial Data – sources of spatial and attribute data - data structure - raster and vector - GIS approach: Layer – tile – object oriented; Modeling third and fourth dimension - Database Management system: Disadvantages of traditional DBMS – relational database model - integrated spatial and attribute data
UNIT 2 Data input and editing	Encoding methods: Keyboard – digitization – electronic data transfer - Data editing: Checking and correcting errors in spatial and attribute data - transformation – generalization – edge matching - rubber sheeting – building integrated database
UNIT 3 Data analysis	Measurements of length, perimeter and area - queries – reclassification – buffering - overlay - spatial interpolation – surface analysis - network analysis – geo-statistics
UNIT 4 GIS Modelling Basics	Process models: Natural and Scale Analogue Models - Conceptual Models – Mathematical Models - Process Modeling and GIS.- Modeling the Decision Making Process - Visualization Model – TIN – DEM –DTM - Problems in using GIS to Model Spatial Process
UNIT 5 GIS outputs	Maps as output – Thematic Maps - non-cartographic outputs – spatial multimedia – delivery mechanism - GIS and Spatial Decision Support - map as a decision tool

Text Book

1. Ian Heywood, Sarah Cornelivs and Steve Carver, An Introduction to Geographical Information System, Pearson Education Pvt .Ltd., New Delhi, 2010.

Reference Books

2. M. Anji Reddy, Geoinformatics for Environmental Management, BS Publications, Hyderabad, 2004.
3. David Martin, Geographic Information Systems, Routledge, London,2002.
4. Kang-tsung chang, Introduction to Geographic Information Systems,Tata McGraw – Hill Publishing Company Limited, New Delhi, 2006.
5. C.P.LO and Albert K.W.Yeung, Concepts and Techniques of Geographic Information Systems, Prentice-Hall of India, New Delhi – 2006.

15PSTP0105	**Core Course** **Basics of Remote Sensing and DIP**	4 Credits
Objectives *To understand the basic concepts of Remote sensing and Digital Image Processing*		
Specific Objectives of Learning: 1. To understand the basic principles, components and types of Remote sensing. 2. To know about different sensors and data products available inIndia as well as abroad. 3. To learn traditional and Digital Photogrammetry 4. To understand the various Digital Image Processing techniques.		
UNIT 1 Remote Sensing - I	Remote sensing: History and development - components of remote sensing – Electro Magnetic Spectrum - Energy interaction with atmosphere and Earth (Rocks, Soil, Water, Vegetation etc.,) Resolutions (Spectral, Spatial, Temporal & Radiometric) - Optical Remote Sensing: Basic concepts - Optical sensors and scanners	
UNIT 2 Remote Sensing - II	Thermal Remote sensing & Microwave remote sensing - data formats and systems, - Major satellite systems: Sensors and data products of IRS, LANDSAT, SPOT, ERS, IKONOS, Quik Bird, ORBVIEW, ASTER, MODIS, WORLD VIEW, AVIRIS, CASI, MODIS and Hyperion	
UNIT 3 Aerial Photography and Photogra-metry	Aerial photography: Historical development – definition, types of aerial photography and uses, Planning and execution – ground control for aerial photography Photogrammetry: Definition, history of Photogrammetry - Geometry of vertical aerial photograph, scale of vertical aerial photograph, relief displacement.- Stereoscopic parallax - Aerial triangulation - Digital Photogrammetry- use of GPS in Photogrammetry	
UNIT 4 Digital Image Processing - I	Digital Data: Basic Characteristics of digital image - data type and file fomat.- Data acquisition and interpretation- Use of multiple images- multi-station – multi-band – multi-date - multi-stage – multi-polarization – multi-direction – multi-spectral. Digital Image Processing: Introduction - stages in digital image processing - Preprocessing: geometric correction, atmospheric correction and radiometric correction	
UNIT 5 Digital Image Processing - II	Image Enhancement - Image classification: Supervised – unsupervised – Hybrid- Fuzzy Classification - Hyperspectral Image Processing - Output Generation: graphic products - tabular data - digital files - post classification smoothing - data merging - change detection procedures - image transmission and compression.	

15PSTP0106	**Core Course** **Practical I – Geographical Information System**	**2** **Credits**

Objectives:

To familiarize and learn different GIS Software and capabilities of different GIS analysis techniques

Specific Objectives of Learning:

To know about the GIS software capabilities.

To study the various tools and analysis available and perform query operations, statistical operations & internet capabilities in GIS.

1. Map appreciation – map interpretation – thematic layers – map objects – data dictionary
2. Scanning – digitization in CAD
3. Rectification using GPS data, image to image rectification, keyboard entry rectification - setting projections – GIS database design
4. Spatial and attribute data entry and editing and their integration
5. Different methods of selection of spatial and attribute data
6. Working with tables and layers properties
7. Map algebra – raster processing tools – interpolation tools – surface analysis tools - hydrology tools– building models
8. Methods of data analysis: Measurement - Buffer – overlay – network analysis – surface interpolation – reclassification – TIN – DEM– distance tools
9. Geo statistical analysis
10. Layout designing

15PSTP0107	**Practical II** **Remote Sensing and Digital Image Processing**	**2** **Credits**

Objective: *To provide practical and hands on experience on visual interpretation elements, digital image processing and some extent in 3D visualization.*

REMOTE SENSING

1. Streovision Test and Anatomy of pocket, prism & Mirror Stereoscopes.
2. Decoding, Marking & Transfer of Principal Points, Base line drawing, Flight line marking, 3D Observation, Tracing details, Transfer the details to base map.
3. Interpretation of Aerial photographs
4. Study of various visual Remote Sensing Equipments
5. Decoding of different Satellite data
6. Interpretation of Black & White and false color multi band imagery
7. Interpretation of Thermal and microwave imagery
8. Transfer of information from Imagery to Base map

DIGITAL IMAGE PROCESSING

1. Reading and displaying satellite data from BIL,BSQ and BIP formats
2. Generating True, False and Pseudo Colour Composite (FCC)
3. Extracting / Subset area of Interest (AOI)
4. Measuring length, distance and area.
5. Generating histograms of various bands
6. Georeferencing the base image, Image to Image, Map to Image – Geometric correction of satellite image
7. Mosaic
8. Enhancement using different filtering techniques, Image Fusion
9. Principal Component Analysis (PCA)
10. Band ratio and NDVI
11. Unsupervised Classification -– Cluster - Iso cluster
12. Supervised Classification
13. Accuracy Assessment
14. Change detection study
15. Layout Preparation
16. Hyper spectral Image Analysis

15GTPP0001	**Compulsory Non Credit Course** **Gandhi In Everyday Life**
Objectives: 1. *To understand and appreciate the principles and practices of Gandhi and their relevance in the contemporary times.* 2. *To develop noble character and attitude to enable the students to cope up with the challenges of daily life*	
Specific Objectives of Learning: To enable students: 1. To study in-depth the life and message of Gandhi. 2. To understand the Gandhian way of Management. 3. To practice the Gandhian model of conflict reduction. 4. To lead a humane life on Gandhian lines. 5. To become a Gandhian constructive worker	
UNIT 1 Understanding Gandhi	Child hood days, Student days, influence of Books and Individuals, Religion, Family, and Social factors. Gandhi as rebel, acquaintance with vegetarianism, as lawyer, encountering and transforming humiliation: in India, in south Africa- train incident, Coach incident, on path way, at court, attack by protesters. Gandhi as political leader and reformer.
UNIT 2 Management	Gandhi's experiments in managing family- Eleven vows, non-possession and sacrifice begin at home – Managing Ashram - community living, service and financial ethics – Managing Social movements- Transvaal March and Salt Satyagraha and nonattachment to position (Nishkama Seva).
UNIT 3 Conflict Reduction	Pursuance of truth and nonviolence ends and means, openness, transparence, love and kindness in handling relationship, nonviolent communication, practicing nonviolence in social and political issues (Satyagraha), conflict resolution practices, art of forgiveness and reconciliation and shanti sena.
UNIT 4 Humanism	Humanism: Trust in goodness of human nature, respect for individual and pluralistic nature of society, dignity of differences, equal regard for all religions (Sarvadharma Samabhava), castes, races, colours, languages etc., simple and ethical life, swadeshi and unity of humankind
UNIT 5 Constructive programmes & contemporary issues	Concept of Sarvodaya, poverty, terrorism, environmental degradation, problems in sharing common resources, health systems and education, science and technology and centralization of power and governance.
Films	Richard Attenborough, **Gandhi.** Syam Benegal**, The Making of Mahatma.** Anupam P. Kher, **Mine Gandhi Ko Nahin Mara**. Peter Ackerman and Jack Duvall, **A Force More Powerful**

15VPPP0101 **COMPULSARY NON CREDIT COURSES**

2 Credits **Village Placement Programme**

P.G.Diploma in Spatial Technologies

(To be offered from the Academic year 2015 – 16 under the CBCS)

S E M E S T E R – 2

CENTRE FOR GEOINFORMATICS

The Gandhigram Rural Institute – Deemed University, Gandhigram – 624302

15PSTP0208	**Core Course** **Global Positioning System and its Applications**	3 Credits
Objectives: *To study GPS surveying and its application*		
Specific Objectives of Learning: 1. Fundamental of GPS. 2. Different GPS satellites and Systems. 3. Different types of GPS & its techniques. 4. Error calculation & basics of LASS & WASS. 5. GPS applications in various fields.		
UNIT 1 Introduction to GPS	History of GPS - Advantages and limitations of GPS - Segments of GPS - Control segment - Space segment - User segment - Geo positioning: Point positioning - Relative Positioning. Static Positioning – Kinematics Positioning- Uses of GPS	
UNIT 2 GPS Systems	GPS systems - NAVSTAR GPS – GALILEO – GLONAAS – IRNSS – MTSAT - Beidou – Compass - GPS receivers based on: data type and yield - realization of channel – user community - Signal structure: carrier ranging, ranging code and navigational message	
Unit 3 GPS Surveying	Basic modes of GPS surveying: Differential GPS surveying vs static GPS surveying. Rapid static positioning technique - Reoccupation technique - Stop & go technique Kinematic positioning technique - Relative advantages and disadvantages - Data transfer and analysis	
Unit 4 Sources of error	Sources of error: Ionospheric and atmospheric delays - satellite and receiver clock error - anti spoofing - selective availability - multi path - dilution of precision - Error correction - Number and geometry of visible satellites - location of GPS receiver - distance between base station and rover receiver - signal to noise ratio - occupation time at a point - differential correction - WAAS, LAAS	
Unit 5 Applications	GPS applications - Siting and routing - surveying - navigational application - vehicle tracking - mobile computing - military application - Precision Farming

15PSTP0209	**Core Course** **Application of Spatial Technologies**	**3 Credits**
Objectives: *To Make the students to formulate, plan, execute and manage Geoinformatics for Various Applications.*		
Specific Objectives of Learning: 1. To Applied of Spatial Technologies for Land resource management 2. To Applied of Spatial Technologies for Water Resources Management 3. To Applied of Spatial Technologies for Disaster mitigation and management 4. To Applied of Spatial Technologies Utility management 5. To Applied of Spatial Technologies for Environmental management		
UNIT 1 Land Resource Management	Introduction – importance – problems - soil erosion estimation using RUSLE/ USLE Land Classification System – FAO- USDA- land capability assessment – crop suitability – Land use / Land cover – classification – change detection - land use planning: Rural and urban - Land Reclamation –Land Information System - DSS for Land use planning and management	
UNIT 2 Water Resource Management	Introduction – importance - water pollution – Water Conservation - Ground water investigation - artificial recharge zone identification – Command area Program water quality monitoring - surface water harvesting structure - flood prediction - Model - sedimentation evaluation - watershed approach for natural resource management – runoff and hydrological modeling	
UNIT 3 Disasters and Calamities	Definition - Classification – Causes - Earthquakes – Landslides - Volcanism - Tsunami Cyclones – Floods - Drought - Forest Fire - Vulnerability – Hazard – Risk Assessment - Natural Disaster Mapping, Management and mitigation using Remote Sensing and GIS.	
UNIT 4 Facilities Management	Infra structure demand analysis - Transportation interaction models – intelligent transportation systems - Transportation planning – mapping transportation - network – classification – optimum route – alignment planning – traffic and parking studies accident analysis - Water utility and electrical utility -telecommunication – tower spotting – route optimization – other utilities - Sitting a new facility - customer loyalty studies - health information system - Crime Analysis: mapping crime data - hot spot analysis - solid waste management	
UNIT 5 Environmental Management	Environmental types and components – pollution: Air – Water – Soil and Noise – Environmental Impact Assessment - Environmental Information System - GIS and RS in Environmental Studies - Environmental and ecological concerns – resource development in remote areas - impacts of anthropogenic activities.

15PSTP0210	**Core Courses** **Spatial Decision Support System**	3 Credits

Objective: *To expose the students about decision making and them to construct spatial decision support system*

Specific Objectives of Learning:

1. To introduce concepts, Architecture and frame work in Decision Making
2. To understand the Concepts of Decision variables
3. To learn about various ranking,rating and comparision methods involved in SDSS
4. To learn about various modelling techniques
5. To Discuss about role of SDSS in various applications

UNIT 1	Introduction to Information and Decision Making - Concepts and Characteristics of Decision Support Systems (DSS) – Architecture of DSS - Framework for Spatial Decision modelling - Spatial Decision Support Systems (SDSS) and GIS
UNIT 2	Concepts of Decision variables – Deterministric, Random, Linguistic - Decision Alternatives and Constraints - Efficiency and Effectiveness of Decision Making – DSS and Expert Systems
UNIT 3	Concepts of Estimating Weights – Ranking Methods – Rating Methods – Pairwise comparision methods – Trade off analysis methods – their comparisions – Decision Rules.
UNIT 4	Concepts and types of Multi-attribute Decision modelling – Multi objective Decision Modelling – Sensitivity Analysis – Maps as Decision tools.
UNIT 5	Land Suitability Analysis – Education and Health Care Resources Allocation – Industry and Business - Water Resources Management – Site Selection – Biodiversity

15PSTP0204	**Core Course** **Dissertation**	**4** **Credits**

- The project shall be selected in connections with the internal guide at the beginning of the semester
- A proposal is prepared with details of objectives, methodology and expected outcome.
- The following are the steps:
- Identification of a problem in consultation with internal guide
- Executing the work as per the instructions of both internal and external guide while incorporating any of the following activities or combination of activities
    - Designing of Geoinformatics
    - GIS implementation and application
    - Map server design
    - RS application
    - GPS application
    - Spatial modeling or such other related topics, which will give focus to Geoinformatics implementation
- The size of the dissertation may be between 50 and 70 pages, which is not inclusive of scripts and other appendices
- The dissertation should be submitted both in print form and digital form (pdf / crystal reports).

15PSTP02E1	**Major Elective** **Geography**	**4 Credits**
Objectives: *To explain about the concept of Geography, and its various branches*		
Specific Objectives of Learning: They will be knowledgeable in geography, geomorphology, climatology, and oceanography 1. To study the basics, scope and branches of Geography 2. To understand different Landforms form by different geomorphic process 3. To understand weather and its related phenomena. 4. To understand cyclones, wind and its role towards the environment. 5. To study coastal and its process.		
UNIT 1 Geography	Basics of Geography – Scope – approaches to study geography: systematic – regional – regional – methods - and techniques of geography: cartography – quantitative – regional – branches of geography	
UNIT 2 Geomorphology	Geomorphology - nature and scope – application of geomorphic techniques - Solar system – Origin of the earth – constitution of the earth - earth's interior – origin of continents and ocean basins - concept of plate tectonics – earth movements: orogenetic and epinogenetic movements – Isostasy – Mountain buildings. Earthquakes – Volcanoes – Rocks – origin – types characteristics; - geomorphic agents and process- de weathering - Fluvial landscape – Fluvial cycle; Karst topography – Coastal topography; Glacial landscape – Eolian landscape	
UNIT 3 Climatology	Definition: Weather – Climate Significance of climatology – Climatic elements – Surface composition and structure of the atmosphere – Insulation - Horizontal and vertical distribution of temperature - Range of temperature – Diurnal, seasonal and annual	
UNIT 4 Atmosphere	Atmospheric pressure and winds – Vertical and horizontal distribution of pressure – Planetary, periodic and local winds – Atmospheric moisture – Condensation forms and precipitation – Types – Spatial and seasonal - Air masses and fronts – Concepts – Classification and properties - Atmospheric disturbances - Tropical cyclones – Temperate cyclones and anti-cyclones	
UNIT 5 Oceanography	Definition of oceanography – Surface configuration of the ocean floor – Continental shelf, slope, deep sea plain and deeps – Submarine relief of Atlantic, Pacific and Indian Oceans - Distribution of temperature and salinity in the seas and oceans - Circulation of oceanic waters - Waves, tides and currents - Marine deposits and coral reefs – Darwin and Daly's theory on coral reefs.

15PSTP02E2	**Major Elective Courses** **Geology**	**4 Credits**
Objective: *To introduce basic geology subjects to the Geoinformatics student especially non geology candidates.*		
Specific Objectives of Learning: On completion of this course, student will be able to recognize geological features using image characteristics and will be able to perform image processing and can interpret satellite images for possible earth resources. 1. The structure of earth, geological structures and tectonic activities 2. The concepts of various geomorphic units, unconformity 3. Minerals, rock types, occurrence and distribution and economic minerals in India 4. Various geophysical methods for Resources Inventory 5. The use of geological techniques for natural resources inventory		
UNIT 1 Introduction to Geology	Introduction: Geology for natural resources inventory - Branches of geology – Scope - Interior of the Earth - Stratigraphic sequence, Geological Time scale - Weathering, - Introduction to geological structures - Plate Tectonics – Earthquake and volcanic belts in India	
UNIT 2 Geomorphic and Structural landforms	Landforms and geomorphic process – Classification - Description of Structural, Denudational, Tectonic Fluvial, Glacier, Aeolian and Coastal landforms - Drainage pattern and Morphometry - Primary and Secondary structures - Dip - Strike - Foliation and Lineation - Folds- faults – Joint – Unconformity	
UNIT 3 Minerals & Rocks	Introduction to Minerals – Physical properties - Chemical properties - Rock Cycle – Classification and description of rocks - Forms and mode of occurrence of rocks – Physical properties of important rocks and ore forming minerals - Distribution of economic minerals in India.	
UNIT 4 Geophysical Exploration	Geophysical methods - Seismic, Electrical, Gravity - Magnetic and aeromagnetic methods - their bearing on Resources Inventory	

UNIT 5 Applications	Resources Inventory: Mineral – Water – hydrocarbon – Soil resources - Natural Disaster Management and Mitigation – Engineering Applications : Site selection & Construction of major structures like Dam, Tunnel, Road, Railway etc. - Artificial recharge structure, Natural disaster mitigation structures

15PSTP02E3	**Major Elective Courses** **Watershed Management**	**4 Credits**
Objective: *To explain about meaning of watershed, watershed dev. Programmes, use of Geoinformatics in watershed development, methods of monitoring and evaluation, areas of evaluation*		
Specific Objectives of Learning: the students will gain knowledge in watershed, watershed dev. Programmes, use of Geoinformatics in watershed development, various methods of monitoring and evaluation, areas of evaluation of watershed development. 1. Define goals and objectives towards watershed management. 2. Understand Federal, State, regional, and local policies as they apply to watershed management. 3. Delineate a watershed utilizing Geoinformatics mapping techniques. 4. Develop and implement a watershed management plan by preparation of various thematic maps. 5. Monitoring, evaluation, PRA methods and financial frameworks needed for successful implementation of a watershed management plan.		
UNIT 1	Watershed – definition – causes and consequences of watershed deterioration - Watershed delineation and codification – watershed approach – advantages – watershed as a unit of planning - Watershed management – approach to watershed development – principles and components of watershed management	
UNIT 2	Integrated Watershed Management Programme: Introduction – institutional arrangements – livelihood orientation – cluster approach – scientific planning – capacity building – multi tier approach - Criteria for selection of watershed projects – project management: Preparatory phase – work phase – consolidation and withdrawal phase executed	
UNIT 3	Role of Geoinformatics in scientific planning: Baseline survey/ bench mark survey - evaluation of deterioration – watershed delineation – acquiring data – preparation of various thematic maps – scientific planning	
UNIT 4	Monitoring – evaluation – learning – outcome/ result - Monitoring: Meaning – factors – indicators	
UNIT 5	Evaluation - focus – need for – types of evaluation; Participatory evaluation – community participation – PRA methods of Evaluation; Depth of water table – cropping pattern – area under biomass – various Land use/ land cover – water body

15PSTP02E4	**Major Elective Courses** **Regional Development & Planning**	**4 Credits**
Objective: *To explain about regional planning, types and process of regional planning*		
Specific Objectives of Learning: Students will gain knowledge on • Objectives of planning, types of planning • Types of region and goals of regional planning • Fundamental considerations of planning region • Information system for regional development • The process involved in regional planning		
UNIT 1	Development Planning - meaning and objectives of planning- Rational for Planning in developing countries - Types of Planning - regional planning as an approach of development planning	
UNIT 2	Concept of Regional and Regional Planning - Regional inequality - homogenous region nodal - adhoc region - functional region, goals and objections of regional planning - It is an interdisciplinary technique - Hierarchy of regions - methods - scalogram - sociogram - Bisection	
UNIT 3	Concept of Planning Region: Fundamental considerations - Objective - availability of data - administrative viability. Delimitation of Economic Regions: rational - approaches to regional economic development: Classical - economic - sociological - holistic approach.	
UNIT 4	Information Systems for Regional Development: Systems approach - Task and elements of information system - information required - sources of information - planning for information systems.	
UNIT5	The Process of Regional Planning: identifying the regionalism present - demarcating the region - determining the needs of the region - making a plan for the region - implementing the plan within the framework of the state and federal sovereignties - review of the plan as it goes into effect.

15PSTP02E5	**Major Elective Courses** **Web Technology for Spatial Technologies**	**4 Credits**
Objective: *To make the students to get basic knowledge about the Internet & Web Technology*		
Specific Objectives of Learning: 1. To learn the basics about internet 2. To gain basic knowledge in HTML, XML, DHTML, GHTML, Javascript & VBScript 3. To introduce the concept of WebGIS and Open GIS.		
UNIT 1	Internet - network information system and W3C - IP addresses and routing - core web technologies: server side, client side-Protocols-API	
UNIT 2	Markup Languages- XML – HTML – DHTML – GHTML - Style sheet technologies – creating dynamic web pages	
UNIT 3	Scripting languages: introduction- Java script, VB script, ASP – Java Script - functions, objectives, and control structures - simple programmes	
UNIT 4	Web GIS: basics and services - components of Web GIS - concept of maps and software repository - scripts and data management system uses and limitation.	
UNIT 5	Web GIS technology -browser for web GIS- -the need for map server and database engine - VRML-inter operability - portable and dynamic web pages - Net and .com methodologies in webGIS - open GIS.

15PSTP02E6	**Major Elective Courses** **Open source software**	**4 Credits**

Objective: *The open source options are for research and development. It helps the candidate to think creatively and independently in Geoinformatics project implementation*

Specific Objectives of Learning:

1. Concepts and protocols used in Open Source GIS
2. Introduction to Open source tool kit, Openjump, GRASS, ILWIS, Openstreet map, QGIS, SagaGIS
3. Fundamentals applied in Open source database management
4. Functionalities of Open Source GIS software in Desktop and Web based environments
5. Complete freedom to modify the software to suit the needs availability of various Open Source GIS software and their architecture

UNIT 1	Introduction to Open source – Importance and Need of Open source – Advantages of Open source– Application of Open source. Open source operating systems: LINUX: Introduction – General Overview – Kernel Mode and user mode – Process – Advanced Concepts.
UNIT 2	Open source Software- Introduction to Open source tool kit - Openjump – GRASS – ILWIS – Openstreet map - QGIS - SagaGIS - Map window-cloud GIS
UNIT 3	Open source Database GIS and allied programming - PostGIS – Python - Java Scripting, HTML.
UNIT 4	Web Mapping with Open source tool kit - Introduction to digital mapping – Merits and demerits of web mapping - Different kinds of web mapping – Openlayers, GeoServer – Geospatial Data Library – Open source tool kits. Project on Webmapping: A Panchayath GIS will be created by different groups.
UNIT 5	GIS CUSTOMISATION PROGRAMMING: GIS Customisation - Needs – Scripting Language – Advantage of Macro Scripting – Sample Case studies.

3. Qgis: https://www.packtpub.com/application-development/mastering-qgis

15PSTPO2MX	**Modular Courses** **Spatial Modeling**	**2 Credits**
Objective: *To obtain knowledge about spatial modeling of user's domain using geographical information systems.*		
Specific Objectives of Learning: To understand the principles of spatial analysis and spatio-temporal modeling To understand the principles of digital model of relief creation		
Unit 1	**Spatial Modelling:** Development, Definition, Classification and Verification of spatial models. Spatial system theory. Temporal modeling and dynamic description of geoobjects. Spatial access methods.	
Unit 2	**Types:** Data models – Static models – Dynamic models Cartographic models – Spatio – temporal models – Network models – Models based on purpose, methodology and logic – Rased Based Model – Vector based model	
Unit 3	**Surface Modeling:** Basic statistics and its GIS expression; Spatial dependency; Spatial interpolation (IDW, Kriging and others); Assessing interpolation results; Mapping spatial dependency; Sampling design – 3 dimensional models of relief.	
Unit 4	**Spatial Data Mining:** Linking numeric and geographic patterns; Normalizing maps; Viewing scatter plots; Clustering mapped data; Investigating map correlation; Developing prediction models; Assessing prediction results.	
Unit 5	**Future Directions:** Dynamic map pedigree – Toward a humane GIS – GIS software's changing roles – Evolving the GIS mindset – Multimedia Mapping – Map display

MODULAR COURSE

5PSTPO2MX	**Modular Courses** **Introduction to Rural Development**	**2 Cred**

ɔjective:

is course introduces principle and concepts of Remote Sensing and GIS, its applications j ology, natural hazards and environmental management.

ecific Objectives of Learning:

ı completion of this course, student will be able to recognize geological features using ima aracteristics and will be able to perform image processing and can interpret satellite images f ssible earth resources.

Unit 1	Rural Development: Concept - Facets-Major issues
Unit 2	Theoretical Framework for rural development - Assets distribution- land ownership methods of production - -resource distribution- social framework of agriculture
Unit 3	Rural Development Programmes of Government of India - Past and Present programmes - Impact of rural development programmes
Unit 4	Stakeholders in rural development: State and Bureaucracy in rural developmen Panchayati Raj Institutions (PRIs) - NGOs. People's Participation - Myths and reality
Unit 5	Sustainable Rural Development - Gandhian Economic Order - Dr.J.C.Kumarappa's - Theory of Economic Permanence

15CSKP02N1	**Compulsory Non Credit Courses** **Extension / Field Visit**	**Credits**

15CSKP0201	**Compulsory Non Credit Course** **Communication and Soft skills**
Objectives: 1. *To develop inter personal skills and be an effective goal oriented team player.* 2. *To develop professionals with idealistic, practical and moral values.* 3. *To develop communication and problem solving skills.* 4. *To re-engineer attitude and understand its influence on behavior.*	
UNIT 1	SELF ANALYSIS SWOT Analysis, Whom am I, Attributes, Importance of Self Confidence, Self Esteem
UNIT 2	ATTITUDE Factors influencing Attitude, Challenges and lessons from Attitude. Change Management Exploring Challenges, Risking Comfort Zone, Managing Change
UNIT 3	MOTIVATION Factors of motivation, Self talk, Intrinsic & Extrinsic Motivators
UNIT 4	GOAL SETTING Wish List, SMART Goals, Blue print for success, Short Term, Long Term, Life Time Goals. - Time Management Value of time, Diagnosing Time Management, Weekly Planner To do list, Prioritizing work.
UNIT 5	CREATIVITY Out of box thinking, Lateral Thinking Presentation
